

Blue Coat Certified PacketShaper Professional

BLUE COAT

Course Overview:

The Blue Coat Certified PacketShaper Professional (BCPSP) Course is an advanced technical training course intended for IT professionals who wish to develop and master the skills to properly install, operate and configure PacketShaper. It replaces the Packeteer Advanced Traffic Analysis and Troubleshooting (Level2) course. This course also covers how to use reporting features and take appropriate action using PacketShaper control mechanisms to optimize network and application performance.

This 3 day course looks deeply into the operation of PacketShaper devices, allowing administrators to properly design and configure different types of traffic trees while using PacketShaper to identify and fix network problems.

Target Audience:

The course is oriented towards the learning needs of working IT network professionals responsible for troubleshooting network application performance using Blue Coat PacketShaper appliances.

Objectives:

The content covered in this course includes:

- Blue Coat PacketShaper Architecture
- Advanced Classification
- Advanced Bandwidth Management
- Understanding Adaptive Response
- PacketShaper Authentication
- Compression and Acceleration
- Introduction to IntelligenceCenter
- Introduction to Policy Center

Prerequisites:

Blue Coat Certified PacketShaper Administrator (BCPSA) certification, or waiver exam. Student should have practical experience with the PacketShaper appliance in the field with a solid understanding of networking and general knowledge of application behavior on Wide Area Networks.
